/ Ul-CF-DUI is a normalized cDNA lib=xxy containing the following tissue(s): Primary Lung Epithelial Cells The lib="Ary was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand CDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first strand cDNA contains a library tag sequence that is located between the Not I site and the (AT) B tail. The sequence tag for this

/note="Organ: Eye; Vector: pXx- Ast; Site 1: EcoR I;
Site 2: Not 1; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel:First strand cDNA synthesis was primed with Oligo-dr
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor digested with NotI and then cloned
directionally into pXx-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is CTGCGTCCTC. This library was created for the University
Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,

WPI; 2002-657601/70.

New lung specific nucleic acid useful in gene therapy or as vaccines for treating lung cancer (e.g. squamous cell carcinoma) or non-cancerous lung diseases, as well as for diagnosing, monitoring or staging these diseases.

Claim 1; Page 168-169; 282pp; English.

The present invention describes an isolated lung specific nucleic acid (LSNA) comprising a sequence that: (a) encodes any of the 93 amino acid sequences comprising 17 - 73 amino acids, given in ABB52873 to ABP52865; (b) comprises any of 115 sequences comprising 148 - 3193 base pairs (bp), given in ABQ75262 to ABQ75376; (c) selectively hybridises to (a) or (b), or (d) has 60 % sequences identity to (a) or (b). LSNA and lung specific protein (LSP) sequences have cytostatic activity and can be used in gene therapy and vaccines. LSNAs and LSPs are useful for diagnosing and monitoring the presence and metastases of lung cancer in a patient. An

antibody that specifically binds to an LSP can be used for determining the presence of an LSP in a sample, as well as for treating a patient with lung cancer, particularly by inducing an immune response against the lung cancer cell expressing the LSNAs or LSPB. In particular, these LSNAs and LSPB are useful for identifying, diagnosing, monitoring, staging, imaging and treating lung cancer (e.g. squamous cell carcinoma) and noncancerous disease states in lung

New polynucleotide and polypeptide useful for diagnosing, preventing or treating conditions such as neurodegenerative diseases, anemias, platelet disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or

Claim 1; SEQ ID NO 123; 1185pp; English.

The invention relates to 971 novel human cDNA sequences (ADC29919-ADC3089) and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to nucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression vectors and host cells comprising a nucleic acid of the invention; the recombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; and methods of polymucleotides or polypeptides of the invention; and methods of invention further discloses methods to perventing, treating or ameliorating a medical condition; kits comprising polynucleotide probes and/or monoclonal antibodies for carrying out the methods of the invention; methods for the identification of compounds that modulate the expression or activity of the polynucleotide and/or polypeptide; and 767 contig sequences corresponding to the cDNA sequences of the invention (ADC32628) and the polypeptides encoded by the contigs (ADC32628 ADC3384). The nucleic acids and polypeptides of the invention are useful in diagnostics drug screening forms. useful in diagnostics, drug screening, forensics, gene mapping, in the identification of mutations responsible for genetic disorders or other traits, for assessing biodiversity, and in producing many other types of data and products dependent on DNA and amino acid sequences. They are also used for treating diseases such as Parkinson's disease, Alzheimer's disease and other neurodegenerative diseases, anaemia, placiet diseases, wounds, burns, ulcers, osteoporosis, autoimmune diseases or

cancer. The nucleic acids may also be used as hybridisation probes or primers, and in the recombinant production of a protein. The polypeptides are also useful in generating antibodies, as molecular weight markers, and as food supplements. The present sequence represents a specifically claimed human cDNA sequence of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether progression of prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibit in prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (l) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             485
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   545
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        605

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer; (b) monitoring the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate call carcinogent proctate cancer in a patient; (f) assessing the aggressiveness or indolence of prostate cancer in a patient assessing the aggressiveness or indolence of prostate cancer in a patient

The present invention relates to human proteins and coding sequences of molecules for disease detection and treatment MDDT. The sequences can be used in the treatment of diseases associated with the decreased expression or overexpression of MDDT, such as cell proliferative (cancer, atherosclerosis, hepatitis), autoimmune/inflammatory (e.g. AIDS, atlergaes, asthma), developmental (dwarfism, renal tubular acidosis), neurological (e.g. stroke, Parkinson's disease, epilepsy) and cardiovascular (congestive heart failure, myocardial infarction, angina pectoris) disorders. The present sequence is a coding New human molecules for disease detection and treatment (MDDT), useful for diagnosing, treating and preventing diseases or conditions associat with the aberrant MDDT expression, e.g. cancer, AIDS, asthma, diabetes, Baughn MR, Yao MG, Walia NK, Elliot VS, Xu Y;

The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GGCATAATGGTTATGAAAGCCGCAGTAGATGATGACGCTTCGGGATGGGAGCTCAATGTC 117
                                                                                                                                                                                                                                                                                                                                                                          may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.

The invention describes an isolated polynuclectide a naturally occurring polynucleotide sequence at least 90 % identical to it, a polynucleotide complementary to it or an RNA equivalent of it. The purified secretory polypeptides (SPTW) and polynucleotides are useful in the diagnosis, study, prevention or treatment of diseases associated with decreased expression of functional SPTW, e.g. actinic Keratosis, arteriosclerosis, bursitis, cirrhosis, hepatitis, polycythaemia vera, primary trendscared thrombocytopenia, anaemia, psoriasis, cancers including adenocarcinoma, thrombocytopenia, anaemia, psoriasis, cancers including adenocarcinoma, thrombocytopenia, anaemia, meloma or sarcona, immune system discase mellitus, glomerulonephritis, Goodpasture's syndrome, gout, anahimoto's thyroiditis, hepatitis, multiple sclerosis, osteoporosis, pancreatitis, Reiter's syndrome, autoimmune thyroiditis or rheumatoid arthritis, neurological disorders such as epilepsy, stroke, Alzheimer's disease, plok's disease, Huntington's disease, dementia, Parkinson's disease, plok's disease, Huntington's disease, dementia, Parkinson's disease, other developmental disorder of the central nervous system, mental disorder including mood, anxiety or schizophrenic disorder, annesia or Tourette's disorder. The polynucleotides may be used in hypridiaation and amplification technologies, e.g. in assessing gene expression patterns, to develop a transcript image for a particular cell or tissue, or to create transgenic animals to model human disease. This sequence encodes a human secretory protein isolated in the invention ö 240 300 New purified secretory polypeptides and polynucleotides, useful in the diagnosis, study, prevention or treatment of diseases associated with decreased expression of functional secretory molecules, e.g. AIDS, cancer 593 120 653 Areceaectcagrareccagaaaaarecagaaaaagcaaracaaacreggregacarrac 180 713 773 9 GACCACGGGAGAAGTAGGCATAATGGTTATGAAAGCTTCTGTAGATGATGATGACGATTCAGG CCAAGATTTTGAAGAAGCTTGTCGAGAATTAAAGTTGGGAGAACTACTTCATGATAAGCT ATGGGAGCTCAGTATGCCAGAAAAATGGAGAAAAGCAATACAAACTGGGTGGACATTAC CCAAGATTTTGAAGAAGCTTGTCGAGAATTAAAGTTGGGAGAACTACTTCATGATAAGCT Gaps 0; Length 719; Sequence 719 BP; 223 A; 113 C; 188 G; 195 T; 0 U; 0 Other; Indels DB 6; Score 717.4; DB 6; Pred. The invention relates to an isolated polynucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (EST) for identifying expressed genes or for physical mapping of the human genome, it esponsible for genetic disorders and other traits. The nucleotide captences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide is useful for generating antisense DNA or RNA. The purified polypeptide is useful for generating antisense PNA or RNA. The purified polypeptide is useful for generating antisense PNA or RNA. The purified polypeptide is useful for generating antisense PNA or RNA. The purified polypeptide for this patent did not form pare of the printed specification, but was obtained in electronic format directly from USPTO at sequence. New polymucleotide sequences obtained from various cDNA libraries, useful as hybridization probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. Claim 1; SEQ ID NO 20914; 44pp; English

Sequence 482 BP; 145 A; 82 C; 124 G; 130 T; 0 U; 1 Other;

treating conditions such as neurodegenerative diseases, anemias, platelet disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or New polynucleotide and polypeptide useful for diagnosing, preventing

Example 2; SEQ ID NO 2051; 1185pp; English.

ADC30889 and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to nucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression vectors and host cells comprising a nucleic acid of the invention; the recombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; an enthod of detecting polynucleotides or polypeptides of the invention; and methods of identifying a compound which binds to a polypeptide of the invention. The invention further discloses methods to perenting the methods of invention further discloses methods of perenting underlying a medical condition; kits comprising polynucleotide probes and/or monoclonal antibodies for carrying out the methods of the invention invention methods for the identification of compounds that modulate the expression or activity of the polynucleotide and/or polypeptide; and 767 contig sequences corresponding to the cDNA sequences of the invention (ADC31861-ADC32324) and the polymptides encoded by the contigs (ADC32628 ADC33394). The nucleic acids and polypeptides of the invention in the for asserting the responsible for genetic disorders or other for asserting the responsible for genetic disorders or other for asserting the high polymptides or other for asserting the responsible for genetic disorders or other for the formation care. disease and other neurodegenerative diseases, anaemia, platelet disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or cancer. The nucleic acids may also be used as hybridisation probes or primers, and in the recombinant production of a protein. The polypeptides are also useful in generating antibodies, as molecular weight markers, and as food supplements. The present sequence represents a human contig sequence used in an example of the invention. Note: The sequence data for traits, for assessing biodiversity, and in producing many other types of data and products dependent on DNA and amino acid sequences. They are also used for treating diseases such as Parkinson's disease, Alzheimer's this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at invention relates to 971 novel human cDNA sequences (ADC29919ftp.wipo.int/pub/published_pct_sequences.

The inversion or muscle and fat deposition (designated IMED), derived from cattle, and the IMED nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 5912 nucleotide sequences, appearing as ABX50072-ABX5593, or complements of them. Also included are included are appearing as ABX50072-ABX5593, or complements of them. Also included are included are included and also included are included and also a promoter and a 3 non-translated sequence that functions in the cell to cause termination of transcription and addition of promoter and a 3 non-translated sequence that the cell to cause termination of transcription and addition of polyadenylated ribonucleotides to a 3 end of the mRNA molecule; and close the secretaring a level or pattern of a molecule in a bovine cell or tissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid permits the detection of the molecule; and (b) complementary nucleic acid permits the detection of the molecule; and (b) cetecting the level or pattern of the complementary nucleic acid permits the detection of the complementary nucleic acid permits the detection of the complementary nucleic acid sequence confidence acid is used for the detection of the complementary nucleic acid is predictive of the complementary nucleic acid is used for the detection of the complementary nucleic acid is used for the detection of the molecule. The IMPD nucleic acid is used for determining a level or pattern of a molecule in a bovine cell or tissue. It is useful for genome mapping, gene identification and analysis, cattle breading, preparation of constructs for use in cattle gene expression, or constructs for use in cattle gene expression, or constructs for use in cattle gene expression, or sequence was not shown in the specification but was obtained in cattle format from the USPTO web site:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    446
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               506
                                                                                                            This invention describes a novel method for determining the degree of methylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convext cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respirators systems etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              439
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         87 IGCICGIICGIGCICGCAACCACIAAGGICIACGCAAACCICCACGGITIICCIICCGCCI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CCGGGCTCCGCCTCTTTCCGGGAACCGCCCACTACCCAGGACTCCGACAGAGGGTGAAAA

Determining the degree of cytosine methylation in genomic DNA, useful for diagnosis and prognosis, comprises selective hybridization of amplicons from chemically treated DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention describes a novel method for determining the degree of methylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method is used:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously, ABQ13410-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ABQ54121 represent genomic DNA sequences used to illustrate the method

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; determining whether prostate cancer has metastasized in a patient; (I) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gарв
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    25;
